

Seasoned mining executive joins Escape Board as work commences at Red Rock

TSX Venture trading symbol: "EGT"

April 24, 2007 -Toronto, Ontario, Canada: Escape Group Inc. ("Escape" or the "Company"), President, T. John Magee is pleased to announce that Mr. Peter Mordaunt, P.Geo. ICD.D has joined the Board of Directors of Escape Group Inc.

Mr Mordaunt brings over twenty five years of international exploration experience and was previously the Chairman and President of Corner Bay Silver which was acquired by Pan American Silver in 2003. He is currently the President and Chairman of Stingray Resources which recently acquired the El Pilar oxide copper project from Xstrata.

Earlier this year, the Company completed a \$5.0 million private placement to acquire the Red Rock gold and silver project in Nevada, USA. The Red Rock project has all of the classic earmarks of a low sulphidation epithermal system. Within this extensive land package several high grades intercepts have been previously reported including RMR-4 which intercepted 115 feet grading 1.61 oz/t Au and 8.04 oz/t Ag (from 405-520 feet) and RPC-90-907 which intercepted 25 feet grading 1.98 oz/t Au and 5.07 oz/t Ag (from 450-475 feet). Although Escape's technical team cannot quantify the extent of these intercepts, clearly these gold and silver values represent a meaningful starting point for continued exploration.

Initial work at Red Rock will include the re-logging of the drill core within the Discovery Zone and re-interpretation of the historical geophysical data. In addition the Company has engaged Quantec Geoscience to conduct a Titan 24 geophysical survey. This survey is designed to test the potential for additional targets adjacent to and at depth beneath the Discovery Zone and to test the potential for extensions of the bonanza zone beneath the occurrence of a proximal rhyolite dome into the more receptive Tertiary volcanics. The Titan 24 system measures to depths of 750 metres and will provide sub surface pre-drilling information.

Once these activities are completed the Company can focus on drilling at Red Rock.

T. John Magee, P. Geo is the qualified person pursuant to National Instrument 43-101 and supervised the technical information presented in the news release.
